

sea stinger

area denial system

non lethal
vessel
stopping

The Sea Stinger is an air pressurised launcher for vessel entanglement and immobilisation.

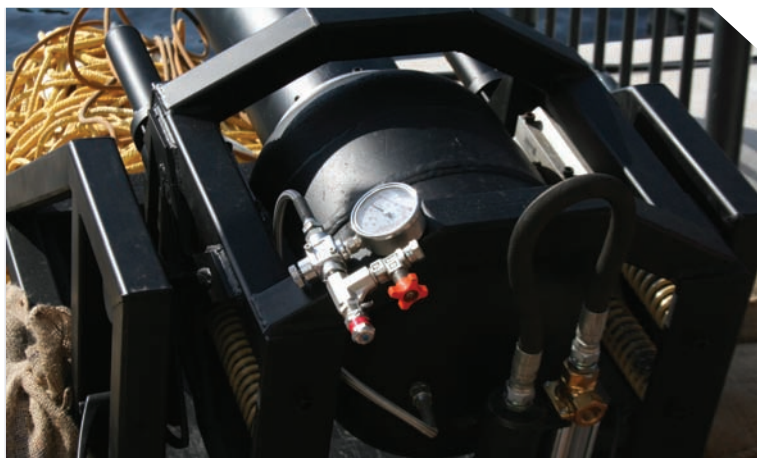

The device has an operating range over 500m and is capable of deploying robust 'heavy' netting across 100m of water to disable a vessels props and protect a potential target quickly and efficiently.

Operating at 1000PSI the Sea Stinger is ideally suited for large vessel, port and infrastructure protection by non-lethal means. It can be remotely fired and is simple to use and to maintain.

sea stinger

area denial system

Key Features:

- Robust construction for the marine environment
- Able to launch multiple sub-projectiles over a wide area
- Uses compressed air – no pyrotechnics
- Can launch payloads up to 22Kg in weight out to 500m
- 1000PSI operating pressure

Capability:

Its large visual signature provides a readily identifiable means of deterrence and due to its greater reservoir capacity it is capable of launching greater payload weights over longer distances than its smaller cousins.

Specification:

Barrel Diameter: **188mm**

Barrel Length: **1200mm**

Reservoir capacity: **15Ltr**

Max Payload: **22Kg**

Material construction: **Steel**

Total unit weight: **160Kg**
