

Battlefield Interoperability Software

Complexity simplified

Off-the-shelf software to integrate and coordinate distributed systems supplied by multiple vendors in challenging technical environments

2iC is proven to:

Deliver the performance and cost benefits of enterprise middleware software in lean tactical environments

Enable flexible interoperability between systems that were not designed to work together delivered in hours, not the conventional years

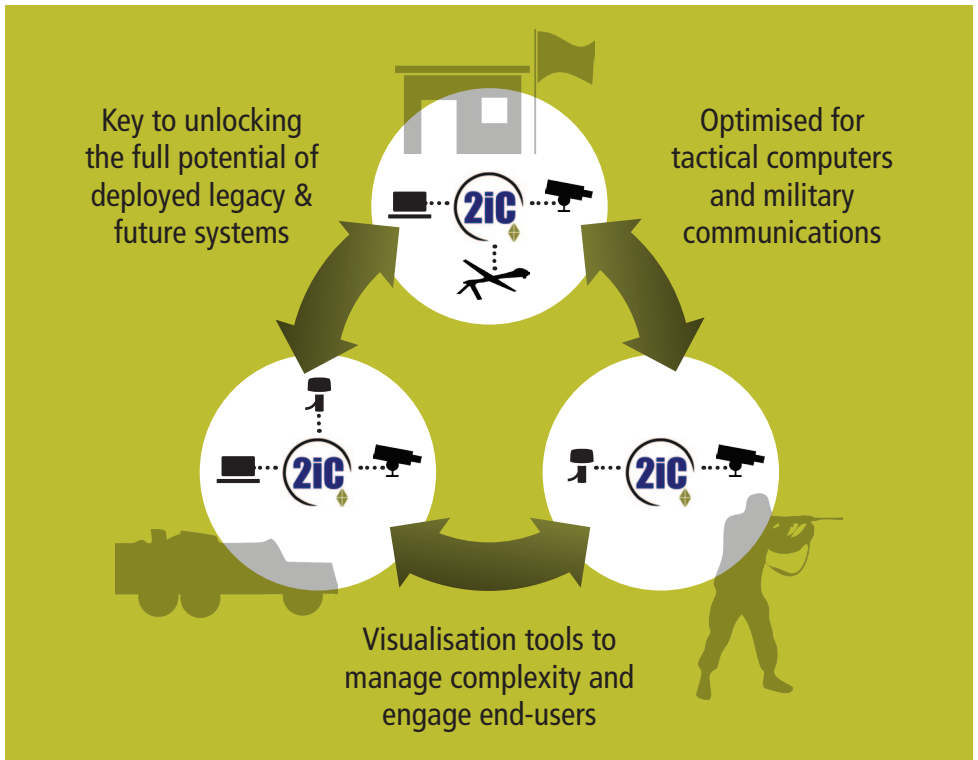

Be fully complementary with legacy and future systems, assets and capabilities

www.2icworld.com

2iC have created two innovative approaches to address systems interoperability:

- 1. Lean Services Architecture (LSA)**
Service Orientated Architecture (SOA) designed for lean technical environments.
- 2. Decentralised Operating Procedures (DOP)**
Procedural based flexible coordination to achieve tangible goals.

Both are supported by software implementations, proven through UK Ministry of Defence trials and adoption. Using open standards, 2iC software tools connect previously disconnected systems on soldiers, vehicles and bases throughout the battlefield to increase operational, technical and commercial flexibility.
