

CHANGING THE DYNAMICS IN WAREHOUSING.

Wincanton has helped General Dynamics UK, a leading prime contractor, to increase storage capacity, reduce costs and relocate one of its stores into the Bicester defence store, managed by Wincanton.

Key benefits delivered include:

- Significantly increased capacity through new racking installation at Bicester, providing the storage needed for an additional 2,900 pallets.
- Reduced costs for transport as removed necessity to move goods between stores.
- A flexible warehousing solution providing scalability for seasonal peaks and future demands.
- A 100% increase in productivity through the reconfiguration of the picking process, leading to reduced pick times.

General Dynamics UK now has a robust and scalable operation which can expand quickly at minimal cost as the business grows into the future.

"The project has been a huge success and has allowed us to increase value for money for our customers. This activity is firmly linked in to SC21 and is now part of the continuous improvement culture that General Dynamics UK and Wincanton have been nurturing."

Paul James,
C4I UK supply chain manager,
General Dynamics UK Limited.
