

NV Mount & Spotting Scope CES

MOMS was designed for the needs of special observation groups. It allows the Spotter and shooter to view the same target simultaneously.

The mount is specifically designed for the Leupold Spotting Scope and allowing for the fitting of front mounted NV or TI units

It is machine cut from a solid block of aircraft grade aluminum resulting in light weight, but very high strength. There are two wings mounted left and right for accessories such as lights and lasers.
