

MISS DISTANCE INDICATOR AS-134/12U

This data sheet describes the general universal 12-sector miss distance indicator (MDI) model AS-134/12U which is designed to be installed in target drones or hard targets. The universal MDI can very easily be modified to fit all target drones or hard targets available on the market.

The MDI is intended for all target courses, i.e. it is possible to fire at a target coming from any direction. The MDI measures the miss distance and angular position in 12-sectors of a passing supersonic projectile.

The MDI detects acoustically the shock wave generated by a supersonic projectile. The miss distance is determined by the amplitude of the shock wave while the angular position is determined from the time information from the hit order of the indicator's six pressure sensors.

The miss distance and angular position of the projectiles are measured in real time and the data is transmitted as raw data signals via

the special designed transmitter to the scoring station.

Since raw data is used, all calculations are made in the scoring station.

A recalculation of the scoring result, with later more accurate parameters, can easily be made in the scoring station for further improved accuracy.

The MDI consists of a microphone unit containing six pressure sensors, a transpulse unit, antenna and cables. The microphone unit is mounted in between the drone/hard target nose and its body. The diameter of the microphone unit is adapted to the diameter of the target.

The MDI is powered from its internal rechargeable battery, but can be powered externally. The transpulse unit is waterproof. The antenna which is mounted on the drone/hard target fuselage will ensure safe transmission.

TECHNICAL DATA

AS-134/12U Microphone Unit

The diameter of the sensor unit is adapted to fit the target body diameter

GENERAL

Power supply	Built-in rechargeable 12V battery, 2.1 Ah
External supply	+10 to 14 VDC
Power consumption	Stand by condition 320 mA Transmitting condition appr. 670 mA
Power output	Approx. 0.8 W
Measurements H x W x D	57 x 80 x 280 mm, (connectors included)
Sensor measurements depth x diameter	Adapted to the target diameter
Weight	Appr. 1.5 -2.5 kg depending on target size
Operation temperature	30 C to +55 C
Storage Temperature	-40 C to +70 C
Humidity	8 to 90 % RHNC (TUS-24/12U IP67)

DATA

Scoring capacity	6000 rounds per minute, momentarily more
Scoring calibers	12.7 mm to 5" and missiles
Distance accuracy	min. ± 1 m or ± 15 % of the actual miss distance, whichever is the greatest
Angular accuracy	$\pm 15^\circ$
Sensitivity	6 selectable ranges

TRANSMITTER

Carrier frequency	Frequency within 330-473 MHz
Channel separation	12.5 kHz
Radiated power	typ. 1.0 W
Link type	Half-Duplex
Data transfer rate	Radio 9600 bps
Optional	Encryption AES128
