

## RAID-M100-SIM

Argon's RAID-M100-SIM simulation training system for the RAID-M100

**Argon Electronics is currently developing a simulator for Bruker Daltonics' RAID-M100 detector in order to offer an enhanced selection of instrumented training systems to our military and civil CBRN responder customers.**

The RAID-M100-SIM will come with all the ease of use and realistic features you have come to expect from Argon's other simulation systems, including instructor remote control and after action review capability. This simulator will be compatible with our existing range of CBRN simulation instruments, as well as the PlumeSIM system for instrumented collective wide area field exercise and table-top CBRN training.
